SUMMARY

"Full-Stack & WebOps Engineer with 3+ years of experience building and operating production web platforms in South Korea. Specialized in Next.js, React Native, Python, and cloud infrastructure with hands-on application security experience (OWASP Top 10, HackerOne triaged report, Fortinet Certified). Fluent in Korean and English (E-7 visa holder).

TECHNICAL SKILLS

Languages TypeScript, JavaScript, Python

Frontend React 19, Next.js 14/15 (App Router), Tailwind CSS, ShadcnUI, MUI, Zustand, HTML5/CSS3

Backend Node.js, Prisma, RESTful APIs, GraphQL, Clerk (Auth), Stripe (Payments)

Databases PostgreSQL (Neon), MySQL, MariaDB, SQL

DevOps Docker, Kubernetes (k8s / k3s), GitHub Actions, GitLab CI, Vercel, Linux (Ubuntu)

Security OWASP Top 10, Penetration Testing, Network & Wireless LAN Security, Kali Linux

PROFESSIONAL EXPERIENCE

SAMBU Co., Ltd. — Full-Stack & WebOps EngineerSep 2025 – Present

Gyeongsan, South Korea · Manufacturing & retail company operating its own D2C channel

- Designed, built and operate lowshop.net, the company's official e-commerce platform, owning the full lifecycle from frontend implementation through to server operations (WebOps).
- Launched and manage the company storefront across Korea's major commerce channels — Coupang, Naver SmartStore and Toss — covering business profile setup, store build-out and sales system administration.
- Maintain site uptime and system-stability monitoring, and optimised the payment and data-synchronisation workflows so the online selling pipeline runs without manual intervention.
- Maintained 99.9% site uptime and reduced page load time by 60% on lowshop.net, ensuring seamless payment flows and zero critical downtime across all sales channels.

Cloud Computing Lab, Daegu University— Frontend / Full-Stack DeveloperMay 2022 – Sep 2024

Daegu, South Korea · University research laboratory

- Developed a web/app prototype for remote control and telemetry monitoring of autonomous vehicles.
- Proposed and led a full migration from an existing cross-platform Flutter codebase to a ReactJS + TypeScript architecture, resolving the mobile rendering and compatibility issues that blocked the prototype.
- Worked closely with the Node.js backend developer to complete the architecture migration in a short cycle and deliver the project ahead of its deadline.
- Built responsive layouts for mobile and desktop with MUI and Tailwind CSS, and optimised REST API data synchronisation and render performance.
- Handled version control and code review across GitLab and GitHub within the team workflow.

SELECTED PROJECTS

eYaqin — Location-Based C2C Marketplaceeyaqin-app.vercel.app

Next.js · React 19 · TypeScript · Prisma · PostgreSQL (Neon) · Zustand · Tailwind CSS · Vercel

- Designed and built a neighbourhood-focused C2C second-hand marketplace with location-aware discovery.
- Implemented district- and radius-based search and filtering to raise the relevance of local listings.
- Designed a listing lifecycle (active → reserved → escrow_verification → sold → hidden) to make transaction state explicit for both parties.
- Developed real-time buyer–seller chat including read-status handling, plus reporting and moderation features for platform trust and safety.

- Structured the backend API surface for authentication, listing management, engagement (likes) and nearby discovery.

SmartGuard (SuniyKoz) — SmartGuard (SuniyKoz) — AI-Powered CCTV Surveillance Platform.

- React 18 · Python · FastAPI · Claude Vision · OpenCV · PostgreSQL · Docker
- Solves inventory loss and manual surveillance inefficiency for small retail store owners by automating suspicious event detection and delivering instant Telegram alerts with snapshots.
- Built a two-tier edge/cloud vision pipeline using OpenCV frame processing and Claude VLM that filters routine motion locally, reducing LLM API costs by 100x while maintaining sub-second alert generation.
- **Live** — Deployed in production at a local retail store, processing continuous camera feeds across multi-threaded workers with zero downtime.

eYaqin Mobile — Cross-Platform App (React Native) Private Repo / Active Startup Development

Built with **React Native (Expo SDK 54 / Expo Router v6)**, sharing a unified REST/WebSocket backend with **Supabase (PostgreSQL)** and **TanStack Query** for client-side state management.

- Delivers native mobile capabilities including device camera/gallery upload (expo-image-picker), real-time push notifications (expo-notifications), geo-location services (expo-location), native sharing (expo-linking), and fluid UI interactions via react-native-reanimated and moti.
- Shared typed API endpoints using **TanStack React Query**, real-time socket events via **Socket.io**, and a centralized database schema managed through **Prisma ORM** with **Supabase**.

SECURITY PRACTICE & CERTIFICATIONS

- HackerOne Bug Bounty — submitted a valid vulnerability report against a live production web application; technically validated and triaged by the vendor's security team (closed as a duplicate, but validity officially confirmed).
- Ongoing practice on Hack The Box and TryHackMe: web application vulnerability analysis, infrastructure penetration testing and OWASP Top 10 exercises.
- **Secure Wireless LAN 7.6 Administrator** — Fortinet Training Institute & ISC2, 2026 (CISSP domain: Communication and Network Security)
- **Front End Development Libraries** — freeCodeCamp, 2023

EDUCATION

Daegu University Daegu 2021.03 – 2025.02

Bachelor's Degree in **Software Engineering**,

ADDITIONAL

Languages Korean (Advanced) · English (Advanced) · Uzbek (Native)

Work status E-7

Awards National Open Table Tennis Championship — 1st place (2026), 2nd place (2024); Table Tennis Champions League — 1st place (2024)
