

AKHMAD KHOLMURODOV

Full-Stack & WebOps Engineer

E-7 visa holder · Korean (Advanced) · English (Advanced) · Uzbek (Native)
South Korea — open to relocating to Seoul · +82 10-3802-1005 · seehyuk2000@gmail.com
seehyuk.vercel.app · github.com/AkhmadKholmurodov · linkedin.com/in/akhmadkholmurodov

Full-Stack & WebOps Engineer with 3+ years building and operating production web platforms in South Korea. Next.js and React Native on the front, Node and Python behind them, Linux and Docker underneath — and reviewed against the OWASP Top 10.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	React 19, Next.js (App Router), React Native (Expo), Tailwind CSS, Zustand, TanStack Query
Backend	Node.js, Prisma, FastAPI, REST, WebSocket (Socket.io), Stripe
Data	PostgreSQL (Neon, Supabase), MySQL / MariaDB, schema design
DevOps	Docker, Kubernetes (k8s / k3s), GitHub Actions, GitLab CI, Vercel, Linux (Ubuntu)
Security	OWASP Top 10, penetration testing, Burp Suite, Kali Linux, network & WLAN security

PROFESSIONAL EXPERIENCE

SAMBU Co., Ltd. — Full-Stack & WebOps Engineer

Sep 2025 – Present

Gyeongsan, South Korea · Manufacturing & retail company running its own D2C channel

- Design, build and operate lowshop.net, the company's official e-commerce platform — the full lifecycle from frontend to server operations, including automated payment and data synchronisation.
- Maintain 99.9% uptime and cut page load time by 60%, with zero critical downtime across every sales channel.
- Launched and manage the storefront across Coupang, Naver SmartStore and Toss — business profile setup, store build-out and sales system administration.

Cloud Computing Lab, Daegu University — Frontend / Full-Stack Developer

May 2022 – Sep 2024

Daegu, South Korea · University research laboratory

- Built a web and mobile prototype for remote control and telemetry monitoring of autonomous vehicles.
- Proposed and led the migration from Flutter to React + TypeScript, resolving the rendering and compatibility issues that had blocked the prototype; delivered ahead of deadline.
- Owned responsive UI and REST data synchronisation alongside the backend developer; ran code review across GitLab and GitHub.

SELECTED PROJECTS

eYaqin — Location-based C2C marketplace · web + React Native

eyaqin-app.vercel.app

Next.js · React 19 · TypeScript · Prisma · PostgreSQL (Supabase) · Zustand · React Native (Expo SDK 54) · Socket.io · Vercel

- Neighbourhood-first second-hand marketplace: district- and radius-based search ranks listings by real distance, not a nationwide feed.
- Modelled the listing lifecycle as explicit, server-validated states (active → reserved → escrow_verification → sold → hidden), with real-time chat and moderation tooling on top.
- Extended it with a React Native client sharing one typed REST/WebSocket surface — camera upload, push notifications, geolocation and a nine-palette theme system.
- Migrated the production database from Neon to Supabase under a hard capacity deadline — planned and ran the schema and data cutover with no record lost.

SmartGuard — AI-powered CCTV surveillance · SuniyKoz

Live in retail production

React 18 · Python · FastAPI · OpenCV · Claude Vision · PostgreSQL · Docker

- Two-tier edge/cloud vision pipeline: local OpenCV motion filtering gates what reaches the Claude vision model, cutting vision-API cost roughly 100× while keeping alert generation under a second.
- Pushes a snapshot and a plain-language explanation to Telegram instead of footage to rewind; runs 24/7 on multi-threaded per-camera workers, deployed with Docker.

SECURITY PRACTICE & CERTIFICATIONS

- HackerOne — reported a vulnerability in a live production web application; validated and triaged by the vendor's security team (closed as duplicate, validity confirmed).
- Secure Wireless LAN 7.6 Administrator — Fortinet Training Institute & ISC2, 2026 (CISSP domain: Communication and Network Security) · Front End Development Libraries — freeCodeCamp, 2023.
- Ongoing practice on Hack The Box and TryHackMe: web application vulnerability analysis and infrastructure penetration testing.

EDUCATION & AWARDS

Daegu University — B.S. Software Engineering

Mar 2021 – Feb 2025

Daegu, South Korea · eYaqin entered in the national startup competition, Uzbekistan (2026) · National Open Table Tennis Championship — 1st place (2026)
